

ROCK

DESIGNED FOR
enduring impressions

COLOR BODY

Leading with Integrity and Innovation!

With more than 10+ years of experience in the industry, we are a leading-edge ceramic products manufacturing company with a vision to develop and deliver outstanding surface solutions for our clients. The upward graph of the Rock Granito is the outcome of its efforts to stay ahead of time.

Our manufacturing and processing units are equipped with state-of-the-art technology, efficient processes, expert workforces, and high-tech machinery, all synergizing towards our mission to produce quality products at a competitive price while fostering a climate where environmental technologies can thrive.

At Rock Granito, we recognize that when we listen to others, we cultivate the curiosity and empathy to unlock innovation. Our people are the driving force of the business. We endeavor to leverage talent and innovation to realize our global aspirations and harness the opportunity for the young and growing India.

TECHNICAL INFORMATION

MONUMENTAL FORMAT MINIMAL THICKNESS

*3 format size,
6 color body*

Specific answers to any need.
3 sizes, 15 thickness
and 6 color body.

Designed to elevate large
architectural spaces, our
80x300 cm, 80x320 and
80x240 cm porcelain slabs
redefine surface continuity.

With an elegant 15 mm
thickness, these slabs offer a
perfect balance of strength,
lightness, and refined
aesthetics ideal for modern
interiors.

MADE FOR *contemporary living*

FROM RESIDENTIAL INTERIORS TO HIGH-TRAFFIC COMMERCIAL ENVIRONMENTS, LARGE SLABS OFFER A PERFECT BALANCE OF ELEGANCE, DURABILITY, AND EASE OF MAINTENANCE. LONG LIFESPAN, EFFICIENT MATERIAL USE, AND LOW MAINTENANCE CONTRIBUTE TO ENVIRONMENTALLY CONSCIOUS DESIGN AND SUSTAINABLE CONSTRUCTION.

INSPIRATION AND SURFACES.

This slabs are the outcome of careful research on style and of refined choices in terms of design. This blend has led to the creation of a range, which includes marble, stone, concrete and metal effects, as well as plain colors. Caesar's solutions are completed by three surface finishes, which bring out the best of each look and are especially designed for the many intended uses of the slabs.

PRECISION AT EVERY LAYER

Advanced surface technology ensures uniform texture, consistent color, and superior finish quality across the entire slab, delivering reliable performance and refined aesthetics.

A STATEMENT OF SCALE.

Manufactured using advanced technology, each slab delivers consistent quality, structural integrity, and surface precision ensuring reliability across all applications. The large format minimizes joints and visual breaks, creating smooth, uninterrupted surfaces that enhance spatial flow and visual harmony.

A MATERIAL FOR MODERN PROJECTS

Future-Ready Design Solutions

Large slab surfaces answer the needs of evolving architecture combining innovation, efficiency, and refined design.

15mm

Applications

Large slab surfaces offer unmatched versatility, making them ideal for a wide range of architectural and interior applications.

Advantages

Large slab surfaces combine cutting-edge technology with refined aesthetics, delivering long-term value and design freedom.

WALL

FULL WALL COVERAGE

Elevates interiors and façades with bold, uninterrupted design

DESIGN

Designed for Limitless Applications

Seamless Look Fewer joints create a clean, expansive visual flow

High Strength & Durability
Resistant to scratches, stains, heat, and wear

EASY TO HANDLE

Large slab surfaces are engineered for easy handling without compromising strength.

SUITABLE FOR FULL WALL COVERAGE

Perfectly suited for full wall coverage, large slabs deliver uninterrupted surfaces that elevate spaces.

EASY TO TRANSPORT

Despite their grand scale, large slab surfaces are crafted for effortless transportation.

MANAGEABLE WEIGHT

Large slab surfaces in 15mm thickness offer an ideal balance of strength and manageable weight.

DESIGN + TECHNICAL

Engineered for precision cutting and shaping, large slab surfaces support customised furniture solutions while ensuring strength, stability, and long-lasting performance.

Perfect for bespoke furniture and large-scale contract applications, large slabs enable seamless designs with a refined, high-end finish.

80x300cm
80x320cm

15mm

Applications

Large slab surfaces offer unmatched versatility, making them ideal for a wide range of architectural and interior applications.

Advantages

Large slab surfaces combine cutting-edge technology with refined aesthetics, delivering long-term value and design freedom.

WALL

WALLS OF LARGE INTERIOR SPACES

Large slab surfaces create striking wall designs with seamless continuity and refined elegance. The expansive format minimizes joints, enhancing visual flow and delivering a bold architectural presence.

CLADDING

EXTERIOR WALLS

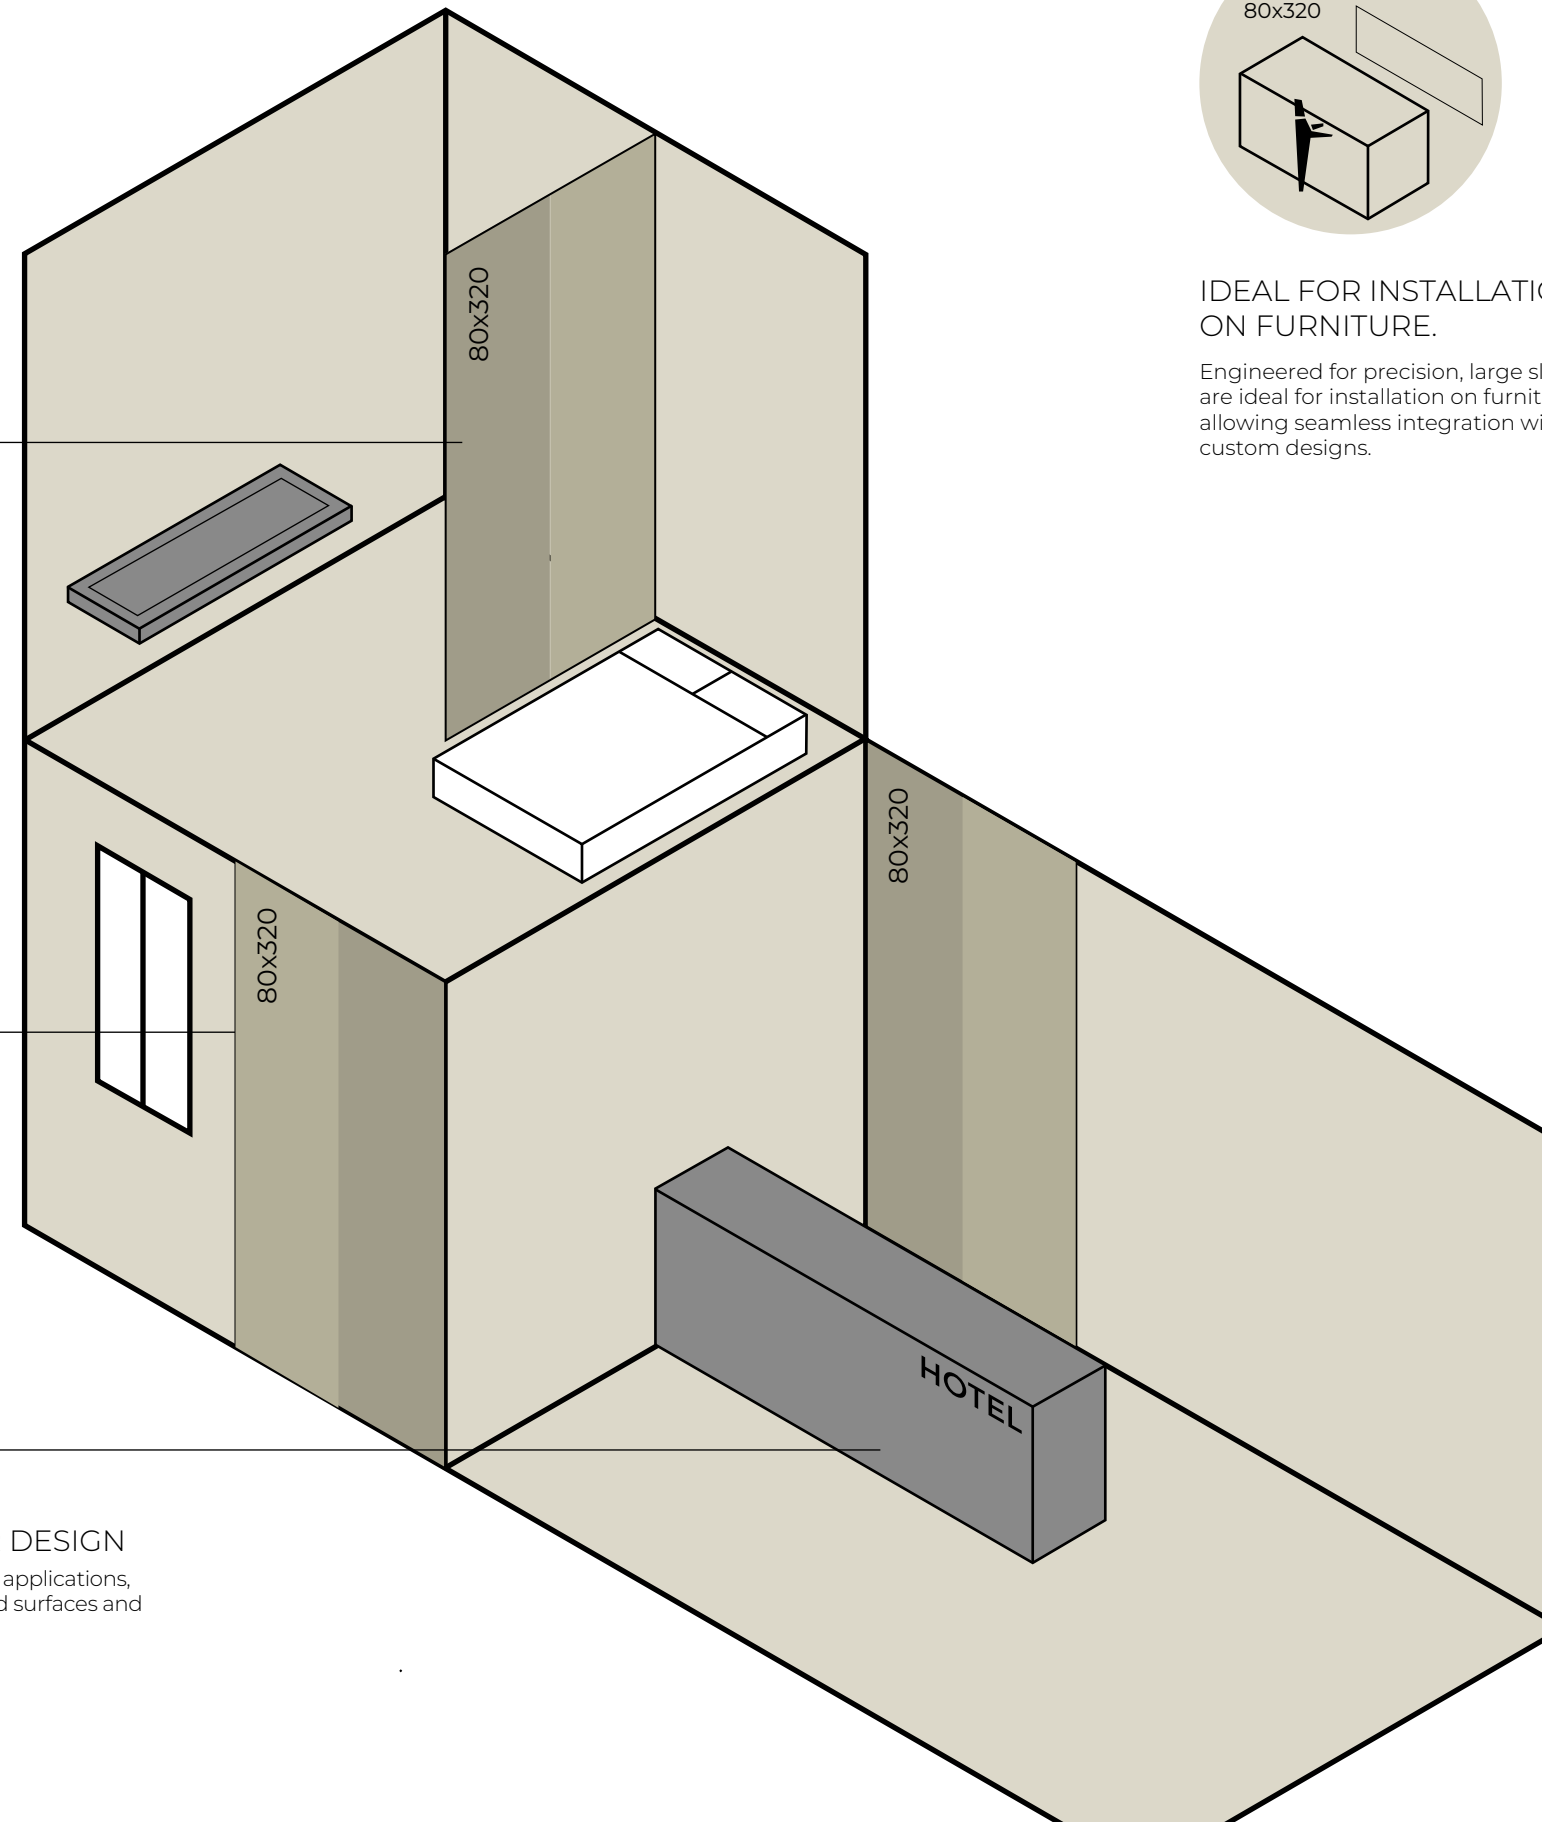

Ideal for exterior wall applications, large slab surfaces offer durability, weather resistance, and long-lasting visual appeal.

DESIGN

FURNITURE AND INTERIOR DESIGN

Perfect for furniture and interior design applications, these slabs enhance spaces with refined surfaces and contemporary elegance.

IDEAL FOR INSTALLATION ON FURNITURE.

Engineered for precision, large slabs are ideal for installation on furniture, allowing seamless integration with custom designs.

TOP LEVEL AESTHETICS

Exceptional surface detailing and finishes deliver top-level aesthetics that elevate both modern and classic environments.

EASY TO PROCESS (holes, cuts, etc.).

Designed for easy processing, slabs allow precise cutting, drilling, and shaping without compromising surface quality.

RECOMMENDED FOR FLOOR RENOVATION

Lightweight yet strong, these slabs are recommended for renovating existing floors, enabling installation without extensive structural changes.

MINIMAL JOINTS AND EXPANSIVE FORMATS ALLOW THE NATURAL FLOW OF DESIGN TO TAKE CENTER STAGE.

REDEFINING SURFACES.
EXPANDING POSSIBILITIES.

PRODUCED WITH RESPONSIBLE PRACTICES AND LONG-LASTING MATERIALS, LARGE SLAB SURFACES CONTRIBUTE TO SUSTAINABLE

CONSTRUCTION BY REDUCING WASTE, INCREASING LONGEVITY

Seamless Look Fewer joints create a clean, expansive visual flow.

Precision & Consistency Uniform thickness and accurate edges ensure flawless installation

Designed to adapt across applications, large slab surfaces provide design continuity for walls, floors, furniture, and architectural elements.

Minimal joints enhance surface flow, creating clean lines and a spacious, uninterrupted appearance.

Designed for full wall coverage, large slabs offer smooth continuity and a refined, joint-free appearance.

With expansive dimensions and precision edges, large slab surfaces enable flawless full wall coverage while reducing visible joints and installation lines.

Durability for Daily Use Resistant to wear, stains, and moisture, large slabs maintain their appearance even in high-use environments.

Large dimensions allow creative layouts, custom cuts, and bold surface expressions without visual breaks.

SUGGESTIONS FOR APPLICATION

bathroom

LARGE SLAB SURFACES ARE IDEAL FOR BATHROOM SPACES, OFFERING SEAMLESS WALL AND FLOOR COVERAGE WITH

MINIMAL JOINTS. THEIR NON-POROUS, MOISTURE-RESISTANT SURFACE ENSURES HYGIENE, EASY MAINTENANCE, AND LASTING ELEGANCE IN WET ENVIRONMENTS.

kitchen

Large slab surfaces are ideal for kitchens, offering seamless countertops and wall cladding with minimal joints. Their non-porous, hygienic surface ensures easy cleaning while maintaining a refined, modern aesthetic.

Designed for contemporary kitchens, large slabs create bold

Work tops, kitchen sinks, tables, shelves.

living

Large slab surfaces enhance living spaces with seamless wall and floor coverage, creating a spacious and elegant environment with minimal joints and refined textures.

Table tops and coffee tables for interiors and exteriors, benches, shelves, partitions.

contract

Customised furniture for hotels and shops, such as modules for bathrooms, reception desks, shelves, benches, tables.

Perfect for bespoke furniture and large-scale contract applications, large slabs enable seamless designs with a refined, high-end finish.

The image features a background of layered, textured paper in various shades of beige and cream. A prominent diagonal crease separates a darker, more textured paper on the left from a lighter, smoother paper on the right. A faint, light gray grid pattern is visible on the right side of the image. In the bottom left corner, the logo for 'IVORY BODY' is displayed. The logo consists of a stylized icon of a vertical line with a diagonal tick mark at the top, followed by the words 'IVORY' and 'BODY' stacked vertically in a bold, sans-serif font.

Technical information

General information

This slabs in sizes 80x320 cm (15 mm thick), 80x300 cm (15 mm thick) & 80x240 cm (15 mm thick) are made of porcelain stoneware that is rectified and wedged and has a single size grade. As far as technical performance is concerned, they are manufactured in compliance with the EN ISO 14411 ISO 13006 Annex G standards for group B1A material.

Packaging

Rock slabs are not boxed but rather arranged loose inside crates or on trestles, according to the data given in the table on. Only crates can be used for the 80x320cm size slab. For more details, please refer to the Technical Manual.

Transport and unloading

During transport, Caesar recommends you not to stack other types of pallet onto the cases containing these products. It is also recommended to use elevator and forklift trucks of dimensions that are suitable for handling the above mentioned pallets. As far as cases containing 80x320 cm are concerned, if you are lifting the case from its short side, it is recommended to use forks with a length of 2400 mm. For cases containing 80x240 cm slabs, it is recommended to widen the forks as far as is possible in order guarantee effective support of the case: if you are lifting the case from its short side, it is recommended to use forks with a length of at least 2800 mm.

Checking material

Fitters must always check material before installation, by placing a few slabs on the floor and making sure that they correspond to specifications both technical and aesthetic. Fitters should also ensure that the slabs are in good condition; please remember than any complaints relating to visible faults on slabs that have been installed will not be taken into consideration.

Handling slabs at the work site

Rock slabs have considerable dimensions and weight. This means that some precautions must be taken to guarantee safe work and avoid breakage of the slabs. For handling and subsequent installation, Caesar recommends the use of suitable equipment, namely a special handling frame, featuring suction cups for lifting the slabs, and, if necessary, a trolley with wheels for transporting heavy weights (approx. 83 kg plus the weight of the adhesive for 80x320 slabs). It is recommended to pay particular attention during movement of each single slab: owing to the considerable dimensions, be particularly careful in order to prevent breakage caused by collision or excessive bending. In particular, for sizes 80x320 and 80x240, it takes at least four qualified operators to take the slab out of the case and move it in the work site area. All operations must be performed in compliance with the local standards for health and safety at work, in particular those relating to handling of heavy weights and particularly troublesome sizes; the use of a frame with telescopic arms facilitates extraction of the slabs at the bottom of the case.

Cutting and drilling

To cut and drill a slab, Rock recommends you to place the slab on a work bench or flat surface made of non-slip material.

- Straight cuts: Rock slabs of sizes 80x320 cm, 80x240 cm can be cut using a cutting guide with engraving trolley featuring suction cups, cutting-off pliers and a diamond pad. Place the slab on the cutting guide, establish the contour of the portion to remove and trace it out, making sure to lock the cutting guide in place using the special suction cups it is fitted with. During engraving, it is recommended to start with two engravings of about 5 cm, at the two ends of the slab. Proceed moving from the inside to the outside; you can then complete engraving by joining these two segments. Now perform splitting using pliers. Make sure to begin your work starting from the two ends. It is then recommended to smooth the cut edge using a diamond pad. In the event of straight cuts close to the edge, it is possible to use an angle grinder, which must be appropriately secured to the guide.
- Corner cutting: corner cutting can be performed in the same manner described for straight cuts close to the edge. Make sure to position the angle grinder based on the corner cut to perform.
- L-shaped cuts: for this type of work, use an angle grinder with a diamond disc and a diamond tool for wet drilling. Start by drilling a hole with a diameter of 7/8 mm, near to the portion to remove. Continue your work using the angle grinder. Provide two engravings of about 5 cm at the two ends of the same portion. Complete by joining the hole to the engraving. Work moving from the centre to the end.
- Rectangular holes: as described for L-shaped cuts, the tools needed are an angle grinder with diamond disk and a diamond tool for wet drilling. Before cutting, use the diamond tool to drill holes with a diameter of 7/8 mm in the points at the ends of the cutting area. You can complete your work by joining the holes using the angle grinder with diamond disc.
- Holes: you can drill material by using a screwdriver and diamond tools for wet drilling (cutting discs). During drilling, make sure that the area involved in kept wet. Once the hole has been completed, finish off the surface with an angle grinder with diamond disc.

List of equipment for handling, cutting and drilling:

- frame for handling featuring suction cups for lifting the slab and, if necessary, trolley for transport;
- work bench of a suitable size;
- cutting guide with engraving trolley;
- cutting off pliers;
- diamond pad;
- angle grinder with diamond disc;
- diamond tool for wet drilling (cutting disc);
- screwdriver.

Recommendations for installation on a screed for wall tiling (all types of slab)

As reference, we recommend you to consult the UNI 11493 standard that sets forth the rules for installation of interior and exterior floor and wall coverings.

Before beginning installation, check that the substrate for installation has been prepared and built in compliance with the intended use and has been correctly prepared for the use of adhesive.

If the case of cement-based screeds, for floor and wall installation, check that the substrate features no cracks, that it is perfectly dry and that hygrometric shrinkage has ended. Make sure that there is no damp or water seepage that could cause the slabs to dislodge. Clean the surface to remove dust, dirt, oil and grease. Before installation, check the flatness of the substrate and compensate for any hollows with suitable levelling products.

Use category "C2 E" or superior adhesives, as envisaged by the EN 12004 standards; for wall tiling, use products with limited vertical slippage (identified by the letter T or in compliance with the EN 12004 standard).

Adhesive must be applied with the double spreading technique, in order to ensure correct distribution of the adhesive itself, guarantee excellent adhesion and avoid air gaps that can lead to breakage. The adhesive must be spread full-bed on the supporting surface, using a notched trowel (10 mm gap between notches). Make sure that the stripes of the last layer of adhesive have a single direction, parallel to the short side of the slab. The application of adhesive on the rear side of the slab must be performed using a notch with 3 mm notches. The slab must be secured in upright position to the handling frame. Using the frame, you can thus correctly position the slab and install it accordingly. To eliminate any air and guarantee better adhesion, when installing make the slab performs a circular movement.

After installation, it is recommended to tap the surface with a special mallet. Proceed from the centre to the sides, parallel to the short side, to ensure effective elimination of air. Consider the use of levelling systems to improve flatness of the surfaces. In order to improve aesthetic performance and practicality, Caesar recommends a grouting joint of at least 2 mm and use of spacer crosses. The grain size of the jointing material must be suitable for the width of the joint. Joints must be filled up to treading level in order to create a continuous surface. Position expansion joints at a regular distance and leave a gap of at least 5 mm between tiled surface and walls (or pillars). In any case, provision of expansion joints must be calculated by the person in charge of the building site.

All notes above are a necessary addition to the rules of the trade.

Installation of 15 mm thick slabs

Rock recommends the installation of 15 mm thick extra large slabs only in the following conditions: residential environments, commercial environments that are subject to light traffic and in any case in contexts where there is no regular passage of heavy loads or circulation of trolleys with hard wheels. The range of 15 mm thick extra large slabs is suitable for installation on existing floors: the slabs can be installed on old floors or marble, natural stone and ceramic claddings, without the need to demolish the existing underlying floor. **ATTENTION:** it is not recommended to install these slabs on a screed directly, since the results of installation strictly relate to the condition - excellent - of the screed, to its seasoning, to the provision of expansion joints, as well as to perfect installation in accordance to "the rules of the trade". In these cases, Rock recommends the use of porcelain stoneware with a conventional thickness.

Care and cleaning

In order to make routine maintenance easier, it is recommend to wash the surface with an acid detergent 36-48 hours from grouting. Use an acid product that is suitable for porcelain stoneware. For more information, visit the www.rockgranito.com website.

1. Handling frame equipped with suction cups

2. Wheeled trolley for transport

3. Working table

4. Guide with cutting carriage

5. Diamond tool for wet drilling

6. Grinder equipped with diamond disk

7. Surface levelling systems

CLEANING & MAINTENANCE

Our products are non porous (due to their high quality raw materials, stringent production parameters and state of the art technology), hence any dust or deposited waste cannot penetrate the surface.

For most cases only a damp cloth is sufficient for cleaning.

Regular cleaning highlights the aesthetic features of the surface and gives it exceptional shine.

For highly aggressive cleaning caused by some common food and substances follow the table below.

Type Of stain	Chemical Product	Example
Grease	Alkaline - Solvent	Detergent
Oil	Solvent	Ammonia, Baking Soda
Ink	Oxidant - Solvent	Alcohol, Liquid Bleach, Nail Paint Remover
Rust	Acid	Hydrochloric Acid, Vinegar, Red Harpic
Lime	Acid	Descaling Reagent, Hydro Chloric Acid
Cement	Acid	Hydro Chloric Acid
Wine	Alkaline	Ammonia, Liquid Bleach
Coffee	Alkaline - Solvent	Ammonia, Liquid Bleach
Rubber	Solvent	Alcohol, Thinner
Plaster	Acid	Hydro Chloric Acid
Candle Wax	Solvent	Alcohol, Thinner
Iodine	Oxidant	Liquid Bleach
Blood	Oxidant	Liquid Bleach
Ice Cream	Alkaline	Liquid Bleach

Note: It is recommended that any kind of stain needs to get clean immediately / as soon as possible.
